

## WINTER UPDATE 2011-12

PROMOTING AND PROTECTING THE HEALTH AND WELL-BEING OF ALASKANS

VOLUME 8 NUMBER 1

### Medicaid Management Information System *New MMIS will be fully X12-Version 5010-compliant*

**T**he Medicaid Management Information System Design, Development and Implementation project team, the Division of Health Care Services, and the Affiliated Computer Services project team have successfully developed system changes for the Alaska Medicaid Legacy system in order to meet the federal 5010 implementation deadline of Jan. 1, 2012. The new MMIS — Alaska Medicaid Health Enterprise — will also be fully 5010-compliant upon completion.

The joint group, including the Division of Senior and Disability Services, created companion guides, and handled training efforts for trading partners and providers. The Alaska 5010 Legacy companion guides have a new look, in compliance with the Workgroup for Electronic Data Interchange (WEDI) 5010 templates. These guides have been

designed to be a “companion” to the 5010 ASC X12 Standards for Electronic Data Interchange (EDI) Technical Report Type 3 guides (TR3s) and only contain information specific to Alaska Medicaid. These companion guides, resources, fact sheets and other 5010 readiness information can be accessed on Alaska’s fiscal agent website at [www.medicaidalaska.com](http://www.medicaidalaska.com) under the “HIPAA 5010” tab.

Once Enterprise is live, screens and processes will have a familiar 5010 transactions view and will support all mandated EDI transactions. Enterprise will also have the capability to readily implement any new federally-mandated HIPAA X12 updates to version 5010 or NCPDP D.0 transactions.

For more information about Alaska Medicaid Health Enterprise, go to [www.alaskamedicaid.info](http://www.alaskamedicaid.info).
